

KARDOS ABDALLA AHMED

Sulaymaniyah, Kurdistan Region of Iraq | +964 770 544 5727 | Kardos5689@gmail.com

PROFESSIONAL SUMMARY

Software Engineer and Full-Stack Developer with hands-on experience building internal business systems, secure web applications, and Microsoft-integrated solutions, while also supporting production enterprise environments. Strong background in React, TypeScript, JavaScript, HTML, CSS, NestJS, PostgreSQL, Flutter, Docker, and RESTful API development, with practical experience in Microsoft Entra ID app registration, tenant integration, Dataverse connectivity, Power Apps testing, and Power Automate workflow design. Brings a combination of product-focused software development and real-world infrastructure understanding across Linux, networking, FortiGate, endpoints, and business system support. Focused on maintainable architecture, secure access control, automation, and reliable delivery.

CORE SKILLS

Software Development: React, TypeScript, JavaScript, HTML, CSS, NestJS, Node.js, Flutter (Dart), Java, RESTful APIs, authentication/authorization, RBAC, JSON, XML

Microsoft Stack: Microsoft Entra ID (Azure AD) app registration, tenant integration, application permission management, Azure fundamentals, Microsoft 365, SharePoint, Microsoft Teams, Outlook, Forms, Lists, Planner, Bookings, Clipchamp

Power Platform: Power Apps (internal prototyping/testing), Power Automate, Dataverse integration/testing, Microsoft app environment connectivity

.NET Ecosystem: C#, .NET, ASP.NET Core, Blazor, Web API fundamentals, Entity Framework fundamentals

Databases & Delivery: PostgreSQL, MySQL, database design, query optimization, Git, GitHub, Azure DevOps (basic exposure), Docker, Docker Compose, Nginx

Systems & Infrastructure: Linux administration (Ubuntu/Debian), FortiGate administration, networking (routing, subnetting, VLAN concepts), UniFi devices, endpoint/printer troubleshooting, CCTV support

WORK EXPERIENCE

Software Engineer (Freelancer) — Self-Employed / Contract (Remote)

Jun 2024 – Present

- Delivered full-stack web and cross-platform mobile solutions using React, TypeScript, Flutter, NestJS, and PostgreSQL.
- Designed and implemented REST APIs, authentication/authorization, and role-based access for business applications.
- Built and maintained database schemas and queries in PostgreSQL/MySQL with attention to data integrity and performance.
- Containerized and deployed applications on Linux using Docker/Docker Compose; supported environments with Nginx / reverse proxy when needed.
- Worked with stakeholders to gather requirements, prioritize tasks, and deliver iterative releases with clear technical documentation.

IT Officer — Hiwa Rauf for Investment & Development (Sulaymaniyah, Kurdistan Region of Iraq)

Jan 2026 – Present

- Designed and developed an internal IT Ticket Management System using React, TypeScript, NestJS, and PostgreSQL to streamline support request intake, assignment, tracking, and workflow visibility across the organization.
- Configured Microsoft Entra ID app registrations for internal and external application scenarios, connected applications to the organization tenant, and managed permission updates and access-related configuration.
- Implemented and tested Microsoft-based internal app scenarios using Power Apps-related tooling and custom code workflows through Visual Studio Code in a tenant-connected environment.
- Connected application data with Dataverse in test scenarios and prepared the solution for internal use; the solution remained in testing / pre-production because Power Apps licensing was not available for organizational rollout.
- Created Power Automate flows on top of application data, including row-change email notifications, approval-related automation, and automatic Microsoft Planner task creation for specific users.
- Integrated and tested Microsoft Teams-connected scenarios and supported Microsoft 365 application usage across Outlook, Teams, SharePoint, Forms, Lists, Planner, Bookings, and Clipchamp.
- Administered and maintained FortiGate firewall policies, web filtering, and secure connectivity to support internal and remote access.
- Supported and troubleshot network infrastructure including UniFi devices (access points / switching) and office connectivity issues.

- Provided end-user support for laptops/desktops (hardware/software), operating systems, printers, and common enterprise applications, ensuring minimal downtime for departments.
- Maintained and troubleshoot CCTV / camera systems and related network components as needed.
- Documented incidents, recurring problems, and configuration changes to improve service continuity and internal technical knowledge.

SELECTED PROJECTS

IT Ticket Management System — React, TypeScript, NestJS, PostgreSQL, Microsoft Entra ID (Tenant SSO)

- Built a responsive internal helpdesk platform for managing IT support requests with role-based workflows.
- Integrated Microsoft Entra ID sign-in using tenant-restricted organizational authentication concepts aligned with OAuth 2.0 / OpenID Connect patterns for secure access.
- Implemented ticket lifecycle features including creation, assignment, status tracking, structured PostgreSQL design, validation, error handling, and audit-friendly behaviors.
- Extended the solution in test environments with Dataverse-linked scenarios and Power Automate workflow automation.

Tourism & Events Booking App — Flutter (Dart), Supabase

- Created a cross-platform mobile application that allows visitors to reserve venues and purchase concert / event tickets.
- Supported discovery and reservation of tourism places, restaurants, cafés, and bars with date/time selection, plus scalable ticket purchase flows and scannable ticket representation.

Space Note — Flutter, NestJS, PostgreSQL

- Built a cross-platform learning application designed to improve studying through AI-assisted note workflows and collaboration.
- Included AI-powered summarization, interactive quiz creation, TTS playback, rich text editing, cloud note sharing, and collaborative features.

CRM System — React, NestJS, PostgreSQL

- Developed a web-based CRM to streamline client interactions, task management, and sales tracking.
- Delivered a responsive React interface with role-based access control and secure PostgreSQL storage for leads, contacts, and activity history.

EDUCATION

Bachelor of Science in Software Engineering — American University of Iraq – Sulaimani (AUIS)

Oct 2020 – Jun 2025

Relevant coursework: Distributed Computing, Software Modeling & Design, Linux Computing Platforms, Advanced Networks.

PROFESSIONAL COURSES

- The Complete Flutter Development Bootcamp with Dart
- The Complete 2024 Web Development Bootcamp
- Java Masterclass 2025 (130+ hours)

CERTIFICATIONS & TRAINING

- Adult AI & Coding Training Program (Certificate of Participation) — Medusa AI (supported by U.S. Department of State / World Learning / MEPI), Nov 2025.
- FortiGate 91G Training (3 Core Certificates / Modules) — Fortinet training, Feb 2026: firewall fundamentals, routing / NAT / traffic shaping, VPN basics, and security profiles.
